**Partition·It™**

*Optimize your hard drive and stop wasting space.*

# Want to add up to 40% more space on your hard drive? ...just Partition-It!

*IT'S THIS SIMPLE: If you're using only one, large partition on your hard drive, you're wasting valuable space. In fact, up to 40% could be going completely unused. But with Partition-It, you can automatically divide your high-capacity drive into many smaller partitions...giving you more space, better organization, and more control!*

## Divide and Conquer!

Partition-It™ for Windows® 95 and Windows 3.1 is a revolutionary new utility specifically designed for today's large hard drives. It optimizes your computer's storage capacity by dividing it into slimmer, more manageable sections. Without backing up. And without putting your data at risk. Here's how:

## Big Drives = Big Data Clusters = Big Waste.

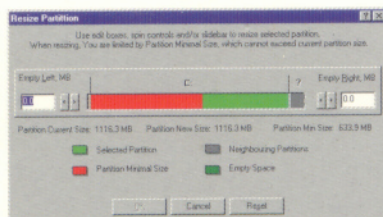

Chances are you've never changed your hard drive's setup since you bought it. You still have one, big, wasteful partition...usually called the "C: Drive."

For example, a 520 MB hard drive is preset to store data in 16K sections, called "clusters." So when you save a 20K file, your computer uses two clusters, or 32K of space.

And 12K of precious space goes completely unused!

It gets worse. Because bigger drives use even bigger clusters, which means even more waste.

The solution is to divide your large hard drive into smaller drives, called "partitions." Smaller partitions use smaller data clusters. So you can store data more efficiently, and access it more quickly.

*Add and resize partitions and see how much space you save instantly!*

## THE POWER OF PARTITIONS:

*On a 1GB hard drive with 32K clusters, Lotus SmartSuite 96 fills up a whopping 180MB of space. But look how much you save when you Partition-It!*

## Partitioning Made Easy.

Partitioning a hard drive used to be, well, hard. And risky. You had to back-up, remove, reformat, then finally restore your valuable data and applications. (If you've tried to master the FDISK utility in Windows, you know what we mean!)

With Partition-It, it's all automatic. Partition-It scans your drive to calculate the optimal cluster size for maximum storage. The *Move-It* wizard lets you move your data and applications between partitions with just a click of the mouse. There's no need to back up anything.

You can even create a custom partition just for your online applications and eliminate clutter from Internet downloads. And Partition-It fully supports Microsoft's new, more efficient, FAT32 file management technology.

## More Space, Risk-Free!

We guarantee your satisfaction 100%. Period. If Partition-It doesn't effortlessly increase the capacity of your hard drive, simply return it within 30 days for a full refund. The only thing you have to lose... is wasted space!

Designed for

Microsoft®  
Windows®95

# Partition-It™

## System Requirements

IBM PC or compatible  
(386DX or higher)

Microsoft  
Windows 95 or 3.1

3MB free disk space  
for Windows 95

6MB free disk space  
for Windows 3.1

4MB RAM  
(8MB recommended  
with Windows 95)

VGA or higher  
resolution monitor

## Includes

CD-ROM  
(3.5" high-density disks  
are available upon request)

All specifications subject  
to change without notice.

*If you aren't completely satisfied  
with Partition-It, just return it within  
30 days for a prompt refund.*
